### **NTU IN RESEARCH TIE UP**

The Nanyang Technological University and the University of California, Berkeley have begun collaborating on three globally significant areas of scientific research.

They are holding a two-day workshop here to discuss the latest research and explore partnership possibilities in stem cells, energy efficiency and synthetic biology. The last combines science and engineering to design and build novel biological functions and systems. This new area of research is believed to hold great potential for addressing problems in biomedicine, environmental remediation and energy supply. CHANNEL NEWSASIA.
