News Summary:

The Agency for Science, Technology and Research (A*STAR)'s Institute of Chemical and Engineering Sciences (ICES), German Academic Exchange Service (DAAD), Unifying Concepts in Catalysis (UniCat) and Nanyang Technological University (NTU) have jointly organized a first of its kind symposium dedicated to the advancement of catalysis on November 2, 2009 in Singapore.

The program included lectures by invited speakers from ICES, NTU, Technical University Berlin, Humboldt University Berlin, Fritz-Haber-Institut der Max Planck Gesellschaft and BASF. The speakers covered the technological advances and discoveries in catalysis in catalytic applications of advanced materials, electro-catalysis, fuels and energy storage.
