Title: NTU to establish Singapore as Asian hub in complexity science research

Date: 27 Feb 2012

Media: PhysOrg

Summary:

Asia will receive a boost in the field of complexity science through a dedicated programme by Nanyang Technological University (NTU). NTU's Complexity Programme aims to concentrate talent and resources in Singapore to become the Asian hub in the global network of scientific institutes that focus on complexity science and its applications through genuine interdisciplinary collaboration.

The knowledge and its applications, that complexity science is expected to deliver is crucial to providing solutions to the grand challenges confronting humanity, such as urbanisation, sustainability, poverty, energy, water, health, climate, security, innovation and the impact of technology.
