THE FAST AND THE FUTURISTIC Built by students from Nanyang Technological University, these two cars will compete in the Shell Eco-marathon this month in Manila. The NV 8 (left) is the first car in Singapore to have a body made of 3D-printed parts. It weighs only 120kg and will take part in the Urban Concept category on fuel efficiency. With its unique tilting ability, the three-wheeled NV 9 (right) can take sharp corners at high speed and will be in the Prototype category.
