Former national swimmer Roy Chan, 60, has won med-als for his considerable contributions. He yesterday won a grand slam for his heroism on one of.

The skin doctor, who in 1988 founded the charity Action for Aids, was yesterday lauded by Health Minister Gan Kim Yong at an annual awards ceremony that rec-ognised the contributions of healthcare professionals for their work in the field. Professor Chan has been with the National Skin Centre since 1988, and was also a fisherman who inspired his desire to help fight Aids. The medical school graduate at the National University of Singapore (NUS) taught him the importance of skin as a vital organ.

"It is very important to fight the stigma against HIV and Aids because it is intertwined with cured and prevent-ions of the disease," said Prof Chan, who won the bronze medal at the 1969 Kuala Lumpur Asian Games. "People are afraid to get tested for fear of discrimination. It hampers prevention and control methods."

For his efforts, Prof Chan received the National Out-standing Clinician Award – one of five awards given out by the Health Ministry (MFglob) as part of the Nation-al Medical Excellence Awards, now in its ninth edition.

"We can give our patients to other doctors, including Prof Chan, and a team from the National Uni-versity Hospital and National Healthcare Group Polycl-inics. The team of four received the National Clinical Excellence Award for their efforts at training and educating and training clinicians to address the needs of an ageing population. We need a better understanding of the needs of older people. These are complex needs: physical, mental and psychosocial issues and requiring multiple forms of management," said Prof Pang, who de-veloped an interest in helping the elderly during his vis-its to nursing homes in Chinatown when he was an un-dersgraduate at the National University of Singapore.

In his speech, Mr Gan said that given its ageing popu-lation, Singapore must do what it can to ensure that SIngaporeans can age in dignity and with purpose.
