NTU, FireEye partner on cyber security research

Thursday 16 February 2017 | 14:07 CET | News

Nanyang Technological University Singapore (NTU Singapore) and cyber security company FireEye have teamed up to explore new areas in cyber security research, and to develop courses to meet the rising demand for cyber security professionals in Singapore. In addition to carrying out joint research projects and developing new curriculum in cybersecurity, the partnership will offer scholarships, and provide internship opportunities to NTU students.

The cooperation will focus on efforts to automatically classify malicious software (malware) and to study new methods that attackers use to infiltrate computer systems. This includes developing services to identify hidden malware behaviour that could evade regular detection methods.
