Standing tall at 14 storeys, wind turbine at Pulau Semakau is Singapore's largest

Although there is limited potential for wind turbines on the mainland, developing a source of renewable energy in a large island helps to overcome limited geographic space, and provide energy to support economic growth, said Singapore's Minister for National Development, Mr Wong. "This project will be a key step in our national energy strategy, and we are confident that it will be an important part of our energy mix in the future."
