Chinese tech giant Alibaba has opened its first research institute in another country. It seeks to push the boundaries of artificial intelligence by working with Nanyang Technological University in Singapore.

Representatives from Alibaba and NTU signed a deal on a 5-year partnership. Alibaba says it will invest several million dollars per year in the joint project.
50 researchers will focus on developing AI solutions in the fields of health care, aging, and transportation.

Alibaba already has a regional headquarters in Singapore. Authorities there have been promoting self-driving buses and other IT projects. Alibaba hopes the joint venture will boost its knowhow in machine learning and cloud computing.
