NTU and Volvo launch world’s first full-sized driverless electric bus for trial

The bus, which is based on the Volvo 7900 series, is being tested at a university campus.

The university is working with Volvo to develop autonomous vehicles for the public transport sector.

The bus is expected to be tested in Singapore by the end of this year.

The autonomous vehicle will be used to transport students and staff on campus.

The vehicle is expected to be able to operate in both urban and rural areas.

The university and Volvo are collaborating to develop autonomous vehicle technology for the public transport sector.
