Volvo Unveils Driverless Electric Bus in Singapore

Singapore: Volvo and a Singapore university unveiled a driverless electric bus on Tuesday that will soon undergo tests in the city-state, the latest move towards rolling out autonomous vehicles for public transport. Singapore has become a testbed for self-driving technology and the world’s first driverless taxis went into operation in a limited public trial in the country in 2016. Volvo and its local partner Nanyang Technological University unveiled what they described as a full-size autonomous electric bus and said the vehicle would soon start trial runs in the university’s campus.
