First Words

Over the years, the main activities of the School have been guided by our Vision as well as the three key initiatives in the School Mission, namely excellence in teaching, excellence in research and excellence in professional activities.

Increasingly, we will be benchmarked, measured and assessed by our stakeholders and funding agencies against the extent to which we have successfully achieved these goals. Hence, it is crucial that staff and students of the School continue to be creative and innovative in their pursuit of knowledge and skills, and to create social impact by way of significant contributions to society and mankind.

The issue highlights a number of achievements by staff and students over the last six months. It is hoped that they will inspire many others to aspire to follow suit. We are forever mindful of the need to create “value add” in order to make a significant difference to the daily life of people in the community and society. I am confident that with our E3 Values, staff and students will achieve continuous social impact through more successes in the coming years.

Dean
School of Electrical & Electronic Engineering

The School Logo

The School logo consists of the 3 letters “EEE” arranged to form a cube, in short, E cube (E³). The 3Es represent the 3 main activities which the School aims to achieve in its mission statement, i.e. excellence in teaching, excellence in research and excellence in professional services to industry. The 3Es are also designed in an interlocking pattern to form a hexagon. This signifies that the 3 main activities are closely interrelated and aptly separated by very thin lines. Its deep blue colour emphasises the synergy of passion, perseverance and dedication in the lifelong journey of exploration, learning and discovering in our quest for new knowledge and contributions towards a better future society. The simple and yet elegant design symbolises the commitment of the School to achieve the ultimate goal of E³: Excellence in Engineering Education.
