The College of Engineering (CoE) held its second tech-fair on 4-8 March 2003. The annual event, 'CoE Technology Week', is jointly organised by the Schools of Civil & Environmental Engineering, Computer Engineering, Electrical & Electronic Engineering, Materials Engineering and Mechanical & Production Engineering, to promote engineering research and technology. It started in 1998 as the highly successful 'E3 Technology Week' organized by EEE. The event was renamed the 'CoE Technology Week' with the formation of the CoE, in keeping with the College's effort to step up cross-discipline research and inter-school collaboration.

The recent tech-fair featured a comprehensive range of programmes including 10 Focus Seminars, a Convention on Nanotechnology and a large-scale Technology Exhibition showcasing nearly 100 research and undergraduate projects.

At the Exhibition, visitors were impressed by the wide range of ingenious projects to improve the well-being of the modern life. The Exhibition received a record turnout of 5,300 visitors, with many of the exhibits attracting keen interest from industry.
