30 June 2009

### The Local On-the-job Training (LOT) Programme Road Show 2009:

On 8 May 09, the School of Electrical and Electronic Engineering organized a road show for the Local On-the-job Training (LOT) programme. This trainee-ship programme is an initiative by the Singapore Economic Development Board (EDB) during the downturn to help build up science, engineering and technical capabilities in areas critical for Singapore's manufacturing and international service sectors.

Seven companies, including Broadcom Singapore, Finisar Singapore, Infineon Technologies, MediaTek Singapore, Philips Electronics, STMicroelectronics and Panasonic Group of Companies, participated in the road show at Lecture Theatre 24 to offer a total of more than 100 training places. Trainees will gain valuable experiential knowledge through the on-the-job training and work on company-based projects.

The show kicked start with a valuable and insightful presentation from Mr. Ulf Schneider, the President of the Microelectronics IC Design and System Association (MIDAS), followed by presentations from the various participating companies. About 300 faculty, students and representatives from EDB and the participating companies were present at the road show. After more than an hour of interactions between enthusiastic students and company representatives, the LOT road show was successfully concluded.

**Mr. Ulf Schneider, President of MIDAS, delivering the keynote**

**Presentation by Broadcom Singapore**

**Audience captivated by the interesting Presentations ...**

**Interactions between participants and company representatives**

**A company representative in action**

**Enthusiastic students finding out more about the companies ...**
