

Special Medical Conditions

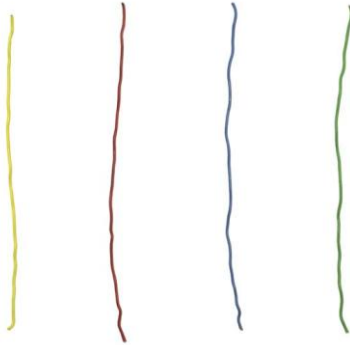

Epilepsy - Students with this condition are strongly advised not to take up engineering programmes (with the exception of Computer Science), and degree programmes from the School of Biological Sciences.

Hepatitis B - Students with this condition are not eligible for the Double degree programme in Biomedical Sciences and Chinese Medicine from the School of Biological Sciences.

International students who are Hepatitis B carriers are required to go for a liver function blood test, alpha-fetoprotein blood test and liver ultrasound. As long as these tests are normal, they may study at NTU. If the test results are not normal, please email the results to adm_intnl@ntu.edu.sg and the admission officers will seek further advice from our doctors in the NTU Medical Centre.

Partial Colour Blindness - Students are eligible for engineering programmes if they are able to correctly identify red and green wires. However, students are not eligible for the Double degree programme in Biomedical Sciences and Chinese Medicine from the School of Biological Sciences if they have colour blindness whether complete or partial.

You can do a quick check with the colour chart below:

You can verify the answers with someone with normal colour vision.
