News Summary:

Just two months after the Nanyang Technological University (NTU) signed the Memorandum of Understanding in Paris with the National Center for Scientific Research (CNRS) and the Thales Group of Companies to set up a joint research laboratory, the three parties are meeting again in Singapore to inaugurate the CNRS-International-NTU-Thales Research Alliance (CINTRA) Laboratory at NTU.

Located at the Research Techno Plaza, the CINTRA Laboratory aims to harness the latest in science and technology to develop innovations in nanotechnologies for computing, sensing and communications applications.

Over the next two years, about 50 Singapore and French researchers will work on critical issues and challenges faced by existing technologies in the microelectronic and photonic industries, promising innovations to meet future commercial as well as defence and security needs.
