SINGAPORE - The Republic's two leading universities - the National University of Singapore and Nanyang Technological University - have done well in a league table comparing universities around the world by subjects.

The latest edition of the Quacquarelli Symonds (QS) World University Rankings by Subject released on Wednesday (Feb 27) showed that in total, 14 Singaporean subject offerings ranked in the global top 10. This was more than the combined totals of China (four), Hong Kong (three), and Japan (three).

Of Singapore's 14 top-10 performances, nine were achieved by NUS, while five were achieved by NTU.

Singapore Management University broke into the top 50 for the study of business and management for the first time since 2015. In doing so, it reached its highest ever rank in this subject table - No. 41.

QS, a London based higher education analyst firm, stressed that Singapore's universities continue to improve, with 41 of its 76 ranked university departments improving their positions year-on-year.

It said these results come amid a widespread Asian malaise at the very top, with China, South Korea, Hong Kong, and Japan all regressing.

The data is used to evaluate over 1,200 universities across 78 countries, providing students, policymakers, academic administrators, faculty, and employers with unique insight into institutional performance. The methodology comprises four key indicators:

\* Academic reputation: how much esteem a particular university is held by the global academic community.

\* Employer reputation: how highly employers worldwide regard a particular institution's graduates.

\* Citations per paper: how impactful, on average, a faculty's research is.

\* H-Index: how productive, and impactful, the average scholar at a given faculty is.

The highest rank of any Singaporean university was achieved by NUS. It rose from No. 6 to No. 2 in civil and structural engineering, having overtaken the University of Cambridge and the University of California at Berkeley.

Nanyang Technological University remained the world's third-best university for the study of materials science.

Harvard University remained the world's leading university, ranking as the world's best institution for the study of 12 subjects. Its closest competitor was still the Massachusetts Institute of Technology, which was the world leader in 11 subjects.

## QS world university rankings by subject 2019: Singaporean top-10 departments

Subject	Rank		Institution
	2019	2018	
Architecture/ Built Environment	8	10	NUS
Chemistry	7	7	NUS
Chemistry	9	11	NTU
Communication and Media Studies	8	12	NTU
Computer Science and Information Systems	10	10*	NUS
Engineering - Chemical	7*	9	NUS
Engineering - Civil and Structural	10	21*	NTU
Engineering - Civil and Structural	2	6	NUS
Engineering - Electrical and Electronic	6	12	NTU
Engineering - Electrical and Electronic	9*	10	NUS
Environmental Sciences	10	10	NUS
Geography	8	10	NUS
Materials Science	3	3	NTU
Statistics and Operational Research	9	11	NUS

\*Joint ranking

- NUS: National University of Singapore
- NTU: Nanyang Technological University

However, the United States higher education system continued to decline relative to competitors, with six fewer No. 1 ranks than last year.

Mr Ben Sowter, director of research at QS, said: "Singapore has long been Asia's most successful higher education system in our rankings, but there is some evidence that its ascendancy may be beginning to increase further. With China, Hong Kong, South Korea, and Japan all seeing their number of top-10 and top-20 places increase, Singapore is the only major Asian higher education system to record consistent improvements.

The Straits Times online, 27 Feb 2019

"This is driven by the increasing desirability of Singaporean graduates, with the average score achieved by its universities for our employer reputation indicator rising this year."

Mr Sowter added that though QS stresses the importance of a nation cultivating a successful system - because the best higher education sectors are those that serve an entire population - Singapore's trajectory could see it take a global No. 1 rank in its subject tables in future years. This could happen as the Republic's universities have come close to entering the global top-10 in the overall QS World University Rankings.

"These would be significant milestones for a group of universities that remain as ambitious as they are competitive," he said.
