# Four New Master's Programmes Leveraging Advancements In AI Launched

NTU is launching four new master's degree programmes in 2026 to prepare professionals for the opportunities and challenges of an AI-driven future.

The programmes are:

Master of Science in Artificial Intelligence in Medicine (AIMed),  
Master of Arts in Digital Humanities (MADH),  
Master of Science in Enterprise Artificial Intelligence (Enterprise AI), and  
Master of Science (Chinese Medicine).

AIMed will train healthcare professionals, engineers and technologists to apply AI responsibly in clinical settings; MADH, the first of its kind in Singapore, will connect digital tools with humanistic inquiry to address the cultural and ethical dimensions of digitalisation; Enterprise AI will produce "AI-savvy" professionals who can translate AI potential into enterprise value; and the MSc in Chinese Medicine will advance holistic healthcare by combining traditional Chinese Medicine knowledge with modern clinical and research practices.
