

NTU launches new AI programmes for mid-career professionals

Mid-career professionals looking to reskill can now enrol in eight new artificial intelligence (AI) programmes at Nanyang Technological University under the SkillsFuture Career Transition Programme. Running between three and six months, the courses focus on areas such as AI engineering and AI-powered user experience design, preparing participants for roles including AI applications engineer and integration engineer. Senior Minister of State Desmond Tan said workers must continue learning and strengthen human skills like critical thinking, creativity and communication to stay relevant as AI reshapes the workplace. Rachel Teng reports.
