Nanyang Technological University (NTU) held Singapore's first 3-D Printing Festival and on Tuesday, hosted two international competitions on 3-D printing.

The first, on wearable fashion, was won by Ms Elena Low (above), 33, and Mr Lim Kae Woei from xyz workshop in Australia.

The second, on abacus design, was won by a team from China.

Both walked away with a \$10,000 cash prize.

NTU's 7-member team, who entered the wearable fashion category, won commendation.

Team leader Tan Yu Jun, who is an engineering student, said the team worked hard to create a fluid look out of plastic to reflect their inspiration - the word 'water' in Chinese calligraphy.

Read the full report in The New Paper on Thursday (Dec 19).
