Constituent structure in a Tagalog text*

Randy J. LaPolla
Nanyang Technological University

This paper is an inductive look at the constituents found in a randomly selected Tagalog text, Bob Ong’s *Alamat ng Gubat* (Makati City, MM: Visual Print Enterprises, 2004).¹ The analysis is based on the full text, but we will only be able to go through the first few lines of the text here, which we will do one by one in order, and discuss the structures found in each line of the text in bullet format after the relevant line. At the end of the paper we will bring up some important questions about the structures found in Tagalog based on this text.

1 *Alamat ng Gúbat*

[alamát ng gúbat] Y/TITLE
legend REL² jungle
(The) Legend of the Jungle

• The first type of phrase we find here in line 1 (the title of the book) is what I will be calling a “Y” phrase (or relator phrase), one formed by *ng* ([nɑŋ]), if the word following this marker is not a common name, or *ni*, if the word following this marker is a human proper name (*nina* when more than one proper name follows).

• This sort of structure manifests the following set of modifying functions: part-whole (inalienable possession), possession (alienable), “possession” with locative and abstract concepts (such as in line 1), “adverbial”³ modification, and predicate-argument structure when the argument is not the topic of the clause or a locative argument marked by *sa*.

• In this structure the head of the phrase is the first constituent, and the modifying element follows *ng* or *ni/nina*.

---

¹ This paper was presented as a keynote address to the 10th Philippine Linguistics Congress, University of the Philippines – Diliman, Quezon City, December 10-12, 2008. I would like to thank all those who commented on the paper, as well as Carl Rubino and Ricardo Nolasco for very helpful comments on drafts of this paper after the Congress.

² When written alone, *ng* is pronounced [nɑŋ]. See table at end for abbreviations used. Acute accent marks a stressed syllable, and a macron means the pitch stays high for that syllable (the stress marks and the glottal stops do not appear in the Tagalog orthography). Spanish and English loan words are in italics in the morpheme-analysis line. Phrases are marked for their syntactic type and their functions in the text, e.g. “Y/Title” marks the phrase as a Y phrase that is acting as the title of the story. I have not been able to maintain the paragraph breaks that appear in the published version. The book should be consulted for that level of structure.

³ I use quotes around “adverbial” here and around “adjectival” below, as there is much controversy about the definition of form classes in Tagalog. See for example Himmelmann 2007 and LaPolla 2010 for discussion. Here I am attempting to contribute to this discussion by looking at phrases rather than words, as if there are no form classes of noun and verb, how can there be noun phrases and verb phrases?
Long ago (at the time of the first epoch),

• The second type of phrase found is what I will call the “X” phrase (or linker phrase): one formed by -ng (following an open syllable)/na (following a closed syllable). This structure manifests a much more varied set of modifying functions than the Y phrase: “adjectival” modification, numeral and measure modification, relative clause modification (restrictive and non-restrictive), demonstrative modification, (intensifier) “adverbial” modification, intra-predicate structure (e.g. the relationship between a positive or negative existential and an existant (the thing that exists) in an existential predicate), indirect quotes, certain types of possessive modification, non-possessive modification, and the relationship between a predicate and its arguments in certain types of referential use (i.e. when they together form part of a (higher) clause argument). Unlike the Y phrase, this sort of structure does not link predicates and arguments in clauses acting as main clauses, but only marks relationships within clausal constituents.

• The semantics of this sort of phrase are often difficult to determine: in many cases it seems to be simply marking the fact that the elements form a phrase.

• The grammatical head of the phrase cannot consistently be identified by position, as in many cases the two (or more) elements can be reversed (magangdang babae / babaeng maganda ‘beautiful woman’).

3  sa isáng liblib na kaharián
   [sa [isá=ng  liblib na  kahárian$^4$]$^{X/LC}$]$_{LP}$
   LOC       one=LNK       remote       LNK       kingdom
   in a remote kingdom

4  sa ilálim ng dágát,
   [sa [ilálim  ng  dágát]$^{Y/LC}$]$_{LP}$
   LOC       bottom       REL       ocean
   at the bottom of the sea,

• The third type of phrase, found here in lines 3 and 4, is the Locative Phrase (LOC), which is marked by sa. The LOC phrase can be used for many sorts of locational and directional senses (e.g. allative, ablative) and for most other arguments not appearing in X or Y phrases.$^5$

• The “preposition” sa can take a single word or an X phrase or a Y phrase as complement. In line 3 it takes an X phrase as complement and in line 4 it takes a Y phrase as complement. It is somewhat

---

$^4$ The word kaharián is formed from the root hári 'king', plus the two affixes ka- ASSOC and -an LFS. The two are independent affixes, but are commonly used together to express abstract concepts, e.g. kaálaman 'wisdom' (< alám 'know'), kagandáhan 'beauty' (< gandá 'beauty'), kabuháyan 'livelihood' (< búhay 'life'). The two affixes are used together for this sense (there is no *kaalam or *alaman), though it seems there would have been an order of affixing, e.g. for kaharian, the sense is ‘a place where (people) have the same king’, so it seems ka- would be affixed first, then -an.

$^5$ For locational predications, nasa, rather than sa, is generally used, e.g. Nasa gubat siya ‘He is in the forest.’
problematic to call *sa* a preposition (as for example Himmelmann (to appear) does), because normally a preposition is preposed to a noun phrase. This is not clearly the case here, as neither the X nor Y phrase is clearly nominal in a grammatical sense, but as the form is preposed to something, I will continue to use the term preposition.

- There are two LOC phrases in these two lines, and they are both functioning at the clause level, that is, the second one is not embedded as a modifier within the first one, and could appear after the predicate rather than before it, as it is here.

5 *ay* may nakatiráng magandá at mabait na sírëna.

```
ay [may [naka-tirá=ng
FT EXIST OS-live=LNK

STAT-beauty CONJ STAT-goodness LNK siren(mermaid)
```

there was a beautiful and nice mermaid who lived there.

- A fourth type of construction is formed by the linker *ay*. We see this linker here at the beginning of line 5. It marks the fact that the element before it is part of the same construction (the clause) as the element following the marker, which is always the predicate of the clause. Lines 2-4 all relate to the predicate in line 5.\(^6\) This construction contrasts with clauses where all elements follow the predicate. The item fronted can be a locative/temporal expression (often a scene setting element) or the topic of the clause (often contrastive). By “topic” here were are talking of the grammatical pivot (grammatically privileged argument) of the construction, the argument singled out for special morphosyntactic treatment (when realis, irrealis, conveyance, or locational affixes are used on the predicate, they coreference the semantic role of the topic—this is the so-called “focus system” of Philippine languages, and the topic itself, if a pronoun, takes a special form, or if a lexical form, takes a marker of specificity). In Tagalog this argument is the topic in the pragmatic sense of being what the clause is about (see Lambrecht 1994 on the definition of topic), and so it is also appropriate to call it the topic.

Much is made of the fact that a clausal argument preceded by *ng* cannot appear in the pre-predicate position of an *ay* phrase (see for example Kaufman 2009), but puzzlement at the difference between a clausal argument preceded by *ng* on the one hand, and arguments preceded by *sa* or *ang*, which can appear in the pre-predicate position of an *ay* phrase, on the other hand, is due to assuming that *ang, sa, and ng* are all the same type of marker, often called case markers. If instead we see *ng* as a linker (which links two elements in a Y phrase and requires two elements to be used) rather than a case marker, much like the *=ng/na* linker and *ay*, then there is no puzzlement about why we do not find arguments standing alone with *ng* in any position, just as we don’t wonder why elements preceded by *=ng/na* don’t stand alone, as *ng* creates a Y phrase in which the two elements are the head and the modifier, in this case the predicate and the relevant argument. That is, I am arguing that just as, for example, we would not expect to achieve the particular modificational relationship between *dágat* and *ilálim* in *ilálim ng dágat* ‘bottom of the ocean’ without them being in the order

---

\(^6\) I did not use brackets to mark off this phrase because it is so long, and the initial bracket might have confused the reader when discussing the first line.
they are in and linked by ng, we shouldn't expect to achieve the particular relationship between kumúha and säging (i.e. predicate and argument) in kumúha ng säging 'get a/the banana' without them being in the order they are in and linked by ng. That is why there can be no “extraction” of this sort of phrase.

- The predicate in line 5 (everything in this line after ay) takes the form of an Existential Phrase (EX), based on the existential may; this word can take a single word or an X phrase or Y phrase as complement. In this case it takes an X phrase as complement. If the remote demonstrative doon/roon compounds with may in the predicate (e.g. in line 27, below: mayroon s'yang karamáman ‘he has an illness’), then the combined form mayroon is linked to the existant in an X phrase. This structure is also used for possession, with the possessor as topic, as in 27.

- A sixth type of structure, seen in the latter part of line 5, is the Conjunction Phrase (CONJP), marked by at; it conjoins two elements of any level. In this example the conjunction phrase is embedded within an X phrase, and links two “adjectival” modifiers.

6 Péro wala siyang kinaláman
   péro [wala? <siya>]<TOP=ng> [kinaláman]<EX>PRED
   but N.EXIST 3sgT=LNK involvement
   But she doesn't have anything to do

7 sa kwéntong ito.
   [sa [kwénto=ng ito]<X/LC>]<LP
   LOC story=LNK PROXT
   with this story.

- In line 6 we find a negative existential phrase, where the predicate is based on the negative existential wala?. As with the positive existential phrase, in this type of phrase the existant can appear as part of the predicate. This structure is also used for (negative) possession, as in this example, with the possessor as topic. See also line 12, below, for another example. It is also possible for the existant to appear as an ang-marked topic (see below on ang), as in Walá na ang sakít [N.EXIST CSM SPEC pain] ‘The pain is gone’.

- Because the personal pronouns are second-position clitics when they are functioning as arguments and not functioning as predicates, they often occur linearly (but not grammatically) within the predicate, even if they represent the topic, as in this case, where the predicate is walang kinaláman, but the pronoun representing the topic appears after the first element of the predicate. This shows that the elements of the X phrase making up the predicate do not need to be contiguous, and that the linker ng ~ na is not necessarily marking a relationship between the element carrying the linker and the element following it.

- In line 7 we have another LOC phrase with an X phrase complement.

---

7 The word kinaláman ‘involvement’ is formed from the root alám ‘know’, plus ka- ASSOC and -an LFS, together forming kaálaman ‘knowledge, wisdom’, and then the infix -in- RPUT appears within the ka- prefix. The resulting form *kinaalaman then obligatorily reduces to kinaláman.
Káya ang pagtutuúnan na lang natin ng pansín

Therefore the one we will be focusing our attention on [lit: our focusing of attention]

• In line 8 we find an *ang* phrase: the particle *ang* (or *si* for personal names/*sina* for more than one personal name) marks the constituent following it as topic of the clause. It is historically a demonstrative followed by the linker (Reid 2000, 2002), and in conversation is often replaced by a form of the remote demonstrative *iyon* plus the linker: ’*yung* (*iyung*). The particle *ang/yung* can be followed by a single word, an X phrase, or a Y phrase. In line 8 two Y phrases (*pagtutuúnan ng pansín* and *pagtutuúnan natin*) overlap, and are both broken up by two second-position clitics, *na* and *lang*. The form of the pronoun, *natin*, shows it participates in the Y phrase, and so does not require the use of *ng* to mark the relationship with *pagtutuúnan*.

ay si Tong,

Here again, *ay* marks the constituent before it as the topic, and the constituent following it as the predicate. The clause formed by lines 8 and 9 is similar to a cleft construction, where what would otherwise be the topic is the focus (in this case the predicate), and what would otherwise be the predicate acts as topic. Although the proper name *Tong* does not function as topic here, it takes the particle *si*, which generally marks personal names that function as topics. This is because proper names (in the singular) must be marked by *si* or *ni* or *kay*, except when used as vocatives, but use of *ni* (which is functionally equivalent to *ng*, but is used before personal names) would imply its participation in a Y phrase, which is not the case here, and *kay* (roughly the equivalent of *sa* for proper names) would imply it is a locative argument, which it isn’t, and so *si* is used here.

---

8 Cf. *tutuúnan* 'concentration', but it seems the order of affixing is first to add *pag-*, forming *pagtutuon*, and then *-an* is added to that.

9 Although the personal pronouns, like *natin* here, and the demonstrative pronouns, like *noon* in line 2, form possessive phrases when they follow reference to a referent, similar to expressions preceded by *ng* in Y phrases, as in *pagtutuúnan natin* or *aso natin* ‘our dog’, they are morphosyntactically more free than expressions preceded by *ng* in Y phrases, appearing often as second-position clitics and phrase-initially and taking the *-ng/na* linker when linker to preceding phrases (e.g. *Nagulat ako ng noon nakita kita* ‘I was surprised when I saw you’), and they can be used without a possessive sense as simply a non-topical argument.

10 A reviewer questions why I use SPEC for the gloss of this form and *ang*, suggesting I use “Topic” instead. I use SPEC, following Himmelmann 2007, but also because it does not always mark a topic; it simply marks the referent as identifiable.
10 ang pinakabátang anák ni Háring Talangká?

other than to be the one who becomes sick.

• The passage from line 7 up to line 13 involves several intertwined phrases: si Tong, ang pinakabátang anák ni Háring Talangká? is the predicate for the fronted topic ang pagtutuúnan na lang natin ng pansín, with ang pinakabátang anák ni Háring Talangká? modifying si Tong as an appositional modifier; pinakabátang anák ni Háring Talangká? is a Y phrase, which includes the X phrases pinakabátang anák and Háring Talangká?.

• Háring Talangká? also forms an X phrase with (is modified by) the non-restrictive modifier na túlad ng maráming hári and is also the topic of the predicate waláng ibáng papél sa kwénto kundi? ang magkasakít, the latter being itself a clause complex with two clauses, the first of which has Háring Talangká? as the (sub)topic, and the second of which (a subordinate clause marked by kung) has ang magkasakít as the topic.

Tong's mother, the Queen, suddenly summoned him (had him called).

- Line 14 begins with the conjunction at, which here links the following clauses (lines 14-17) with the preceding ones (lines 7-13).
- In lines 14-17 again we have a very complex structure, where the (fronted) topic of the highest level structure is a complex structure: itó na ngá ang dahilán kung bákit isáng áraw ay biglá na lang ipinatáwag si Tong ng kanyáng inang reyna has itó na ngá as predicate and ang dahilán kung bákit isáng áraw ay biglá na lang ipinatáwag si Tong ng kanyáng inang reyna as topic, with this topic including the subordinated modifier kung bákit isáng áraw ay biglá na lang ipinatáwag si Tong ng kanyáng inang reyna.
- In line 16 we have the fronted topic marker, followed by the predicate of the embedded clause, which is itself a full clause, with a predicate and topic.
- In the predicate of the embedded clause, biglá and ipinatáwag seem to form a phrase (even though they are separated by the second-position clitics), but there is no morphological marking of their relationship.
- The representation of the actor of the embedded clause is an X phrase but the whole of it forms a Y phrase with the predicate, and the Y phrase is interrupted by the topic.

18 "Tong, anák, ang iyóng amá
PN child SPEC 2sgPOSS=LNK father

19 ay may karamdáman," wíka ng réyna.
ay [may [ka-ramdám-an]EX]PRED2PRED2QUOTE [wíkaʔ ng réyna]Y/TOPIC2
FT EXIST ASSOC-feeling-LFS language REL queen
has an illness", said the queen.

- Lines 18-19 form another clause type, an equative clause (with no copula). In this instance the predicate is an embedded quote, and the topic of that predicate is the quoting phrase. The quote starts with a vocative, and within the quote there is a fronted topic that takes the form of an X phrase marked by ang, and the predicate takes the form of an existential phrase. This sort of structure can be used for interrogative word questions, e.g. [Ano] [ang gusto mo]? [what SPEC want 2sgNT] ‘What do you want?’, attributive predication, e.g. [Titser] [ako] ‘I am a teacher’, and
identificational predication, e.g. “[Ito] [ang gusto ko] [PROXT SPEC want 1sgNT] ‘What I want is this’.

- The topic of the higher structure (the clause that has the quote embedded as the predicate) is a Y phrase, *wika ng réyna*, literally ‘(the) language of the queen’. This phrase is not marked as a topic, but in line 27 we have the same structure, and it is marked overtly as the topic. (See LaPolla and Poa 2005 on speech act constructions in Tagalog.)

20 "Hindi na s’ya nakákalangóy.

[hindiʔ na <siya>TOP nakáka-langóy]PRED
NEG CSM 3sgT INHERENT.ABLE-swim
"(He) is not able to swim anymore.

- In line 20 again two elements (*hindiʔ* and *nakákalangóy*) seem to form a phrase (separated by the second position aspect clitic and the topic), but there is no morphological marking of the relationship between the two elements.

21 Kailángan mong umáhon ngayón din

SPEC only=LNK fruit LNK SIT.ABLE-GER-CAUS-recover LOC 3sgPOSS
the only fruit that can cure him."

- In line 21 *mo* forms a Y phrase with *kailangan*, but this phrase is intertwined with the X phrase formed by *kailangan* and *=ng umáhon ngayón din papúnta*, due to the nature of *mo* as a second position clitic. This X phrase functions as the predicate of the clause. The 2nd person pronoun takes the form *mo* because it is a non-locative argument, but not the topic, of *kailangan*. The 2nd person

---

11 The combination of *ngayon* ‘now’ and *din* ‘also’ means ‘right now’.
does seem to be the topic of the predicate *umáhon*, though, as it is marked for Actor Topic and it is assumed that it is the addressee that will get up.

• In line 22 we have another clause, which might be seen as part of a serial construction with the predication in line 21.

• In line 23 we have a subordinate clause giving the reason why Tong has to get up and go to the land. Again there is no overt topic, though as the predicate is marked as Actor Topic, we assume the actor (Tong) is the topic intended.

• Line 24 is an appositional modifier, modifying *ságing* ‘banana’. It takes the form of a complex X phrase marked by *ang*. One element in the X phrase is a predicate plus a *sa* phrase, *makakapápgaling sa kanya* ‘able to cure him’, which in the context is seen as acting as a modifier of *prutas* ‘fruit’. That is, it functions like a relative clause, but the structure it forms with *prutas* is just like any other X phrase. Again, there is nothing in the structure that identifies *prutas* as a grammatical head, so we identify *prutas* as the element being modified simply by inference, i.e. it makes more sense in the context than the other way around.

non-topic non-

sa argument. Within the quote there is a clear predicate-topic construction, though the predicate is rather complex.

• In line 27 the structure is quite different, as the quoting expression, ang sagót ng rénya ‘the answer of the queen’, is the topic, and the quote itself is the predicate for this topic, the two forming an equative clause (compare line 19 above).

Summary and Conclusion
We have identified the following phrase types:

• **X phrase**: links elements of many types in a modificational relationship. The head cannot be identified consistently using word order.

• **Y phrase**: links elements in a basically possessive relationship. The semantic head (modified element) always appears in initial position. The predicate and a non-topical non-sa-marked argument in a non-equative clause also form a Y phrase.

• **LOC phrase**: marked by what appears to be like a preposition, but which takes an X or Y phrase (or single word) as complement.

• **Topic phrase**: a single word or an X phrase or a Y phrase (including a whole clause) can appear as topic, marked by ang/’yung or, in the case of pronouns, have the topic form, or in the case of proper human names, marked by si/sina.

• **CONJ phrase**: conjoins two elements at any level.

• **ay phrase**: links a topic or locative element with the predicate when it appears before the predicate, contrasting with clauses where the topical elements appear after the predicate.

• **Unmarked phrase**: existential may can take an element within the predicate without overt marking of the relationship (may might include what was historically a linker). Certain other elements seem to be able to be combined into a predicate without overt marking of linkage as well (see lines 16 and 20).

The question then is do these phrases correspond with the types of phrases we find in many other languages, such as noun phrase, verb phrase, and preposition phrase, or do we have a system that works differently?

When writing reference grammars of languages, we often will have chapters on the noun phrase and the verb phrase, with sections within each chapter on the structure of that particular phrase type. If we were to write a reference grammar of Tagalog, could we legitimately have a chapter, for example, on the noun phrase, with a section on the structure of the noun phrase, where that structure is significantly different from the structure we would describe in the chapter on the verb phrase? It seems from the discussion above that the answer would be negative. In that case, how then should we describe Tagalog?

My answer is that we should describe it on its own terms, as I did above, and not try to fit it into any a priori grammatical categories when that is not appropriate.
